

SILACOTE

Inorganic Mineral Paint

The natural paint for earth-based materials

~ CORRECTING WATER ABSORPTION ON POROUS SURFACES ~

Silacote Primer/Sealer with its potassium silicate base, has the powerful effect of consolidating and filling microscopic pores and channels by crystalline formation. This results in liquid water rejection from the surface while still allowing the wall material to transmit water vapor (breathe) as necessary to equalize to its environment.

The photos below show this water resistance effect.

Water on UNPRIMED wall is adsorbed

Note the spread of water as it runs down the wall soaking in as it goes

Water on PRIMED wall sheds and runs off

Note the small beaded stream of water as it runs down from the cup unable to soak in

Silacote Primer/Sealer is zero VOC, non-toxic, permanent, unaffected by smog, acid rain and UV light. Easy to apply by spray, brush or roller.
